

- **Remote review & analysis**
- **Results in greater efficiency of the fluoroscopy & endoscopy suite**
- **Work from the comfort of your office or lab**
- **Custom annotations**
- **DICOM & PACS connectivity**
- **Add audio comments**
- **Stopwatch timer**
- **Archive to CD/DVD/USB/Network**
- **Study editing tools**
- **Import BMP, JPG, PNG, J2K, AVI**
- **Export BMP, JPG, PNG, AVI**
- **Customized workflows**

TIMS DICOM Review Software (TDRS) is a software-only version of the TIMS DICOM System. It includes all functionality of the TIMS 2000 SP system except for image and video capture. Studies from your TIMS systems can be immediately sent from the fluoroscopy or endoscopy suite to a TDRS system anywhere on your hospital network including your office, lab area, or outpatient facility. This provides for greater efficiency in the fluoroscopy suite, allowing more patients per day, because all review & analysis can be done in your speech pathology office or lab rather than the fluoroscopy suite. All TIMS review and analysis tools are available to you with TDRS including study editing, customized annotations, stopwatch timing, adding of audio comments, archiving to CD/DVD/USB/network, customized workflows, sending to PACS, DICOM connectivity, and much more. Additionally, if you have studies (such as pathology or ophthalmology) that are already in digital image form, they can be imported, converted to DICOM, and sent to PACS.
